Two-column reading path

The chart is encountered in the right column after the left column finishes. Its reference appears near the bottom of the left column.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.

The last two measurements dominate the increase (Figure 1).

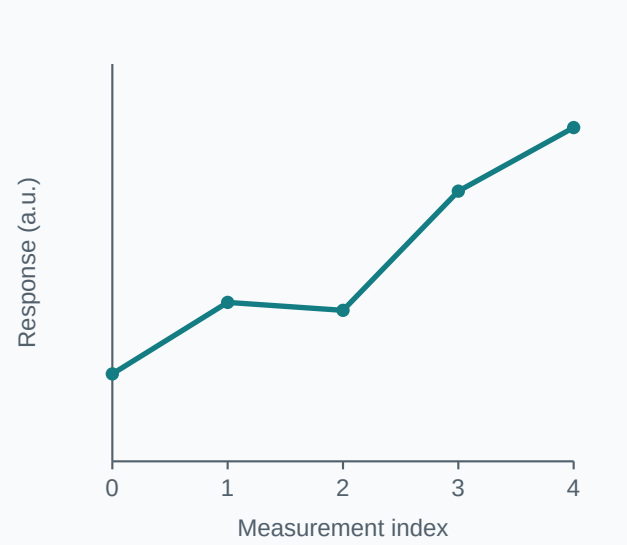

Figure 1. Response across repeated measurement settings.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.
