Readable control

This page uses 11-point body text, conventional margins, and 9.5-point captions. The footnote below uses 8 points intentionally.

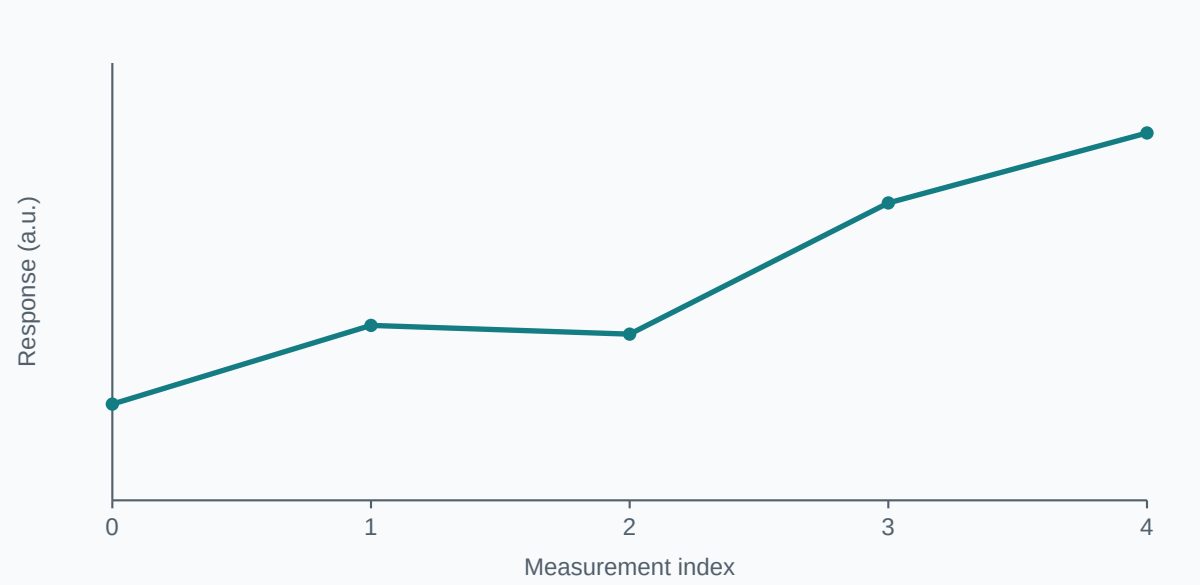

Figure 1. Response across repeated measurement settings.

1. A brief footnote is smaller than the surrounding body text.

Deliberately defective page

The following block is body text rendered at 5 points; it is not a footnote.

Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand. Tiny body text repeats a substantive explanation that readers must understand.

The next two body lines overlap and require source-level repair.
Their baselines are separated by only six points.

Visible text c

ROPPED body text starts outside the page.

Blank-page policy

Page 3 is intentionally blank so this section opens on a new spread. Treat blank-page detection as evidence, then apply the declared document policy.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.

The observations were collected under the same acquisition protocol. Each sample contributes one independent measurement. The reported comparison is restricted to this controlled setting. Additional details document how the experimental record was assembled.
